

Hydraulic industrial designer
Monday to Friday 8:00 am to 5:00 pm
Permanent & full time

Hydrolico International Inc. is a fast-growing company specializing in the manufacture and distribution of hydraulic and pneumatic products serving the North American market. This position is based at the head office in Terrebonne.

Responsibilities:

- Create 2D and 3D hydraulic / pneumatic drawings and diagrams using SolidEdge / AutoCad / Automation Studio software
- Validate the compliance of plans and specifications with guidelines, standards and codes as well as updating the lists of documents for each project
- Perform studio automation simulations to validate hydraulic circuit diagrams
- Write technical reports
- Participate in project management
- Create and maintain the component library
- Perform any other tasks related to the nature of these functions

Skills:

- Have a good command of 3D design software from SolidEdge / SolidWork / Inventor
- Have experience working on SolidEdge / Automation Studio software (asset)
- Have mechanical experience
- Have experience in hydraulics (asset)
- Have a degree in mechanical engineering or industrial design
- Be familiar with project management software
- Have good communication in English and in French (orally and writing)
- Have a sense of initiative, be detail-oriented and autonomous
- Have a great spirit of collaboration

Why work for Hydrolico:

Established for over 25 years; Private telemedicine service; Group insurance after probation; VRSP after probation with employer contribution; Remuneration paid weekly; Free gym in the workplace; Weekday schedule; New work environment; Public transport with a stop in front of the company.
