TRANSMITTERS

Pocket Transmitter

Our Pocket transmitter is the little one that fits in your pocket, but has many functions. With three, four, six or eight buttons it easily becomes your extended arms and hands. Withstands both hard grip, dirt and water. Automatic frequency management allows for continuous work without any interruptions caused by radio interference from other wireless equipment on site. Sometimes you may need an extended operating range than what is standard. Then we just add an extra Pocket that acts as a repeater for the radio link.

G5-R5/10

The G5-R5/10 is our entry-level model with relay outputs. The receiver comes with 5 or 10 relays. The G5-R5 and G5-R10 both have electrically isolated outputs as the relay outputs are separated from the rest of the electronics in the receiver. The maximum load for each output is 5A. At the connection terminals three options points are available: normally open, normally closed and common connection. Protection category: IP65

RECEIVER
